Ankur Singh

Computer Engineering Student • Software Developer

ankursingh99421@gmail.com
github.com/Ankur-Singhh
linkedin.com/in/ankurr-singh/

PROFILE

Computer Engineering student with hands-on experience in AI/ML and backend development. Skilled in Python, MySQL, and React, with experience building end-to-end projects and integrating different technologies to solve real-world problems. Also experienced in leading teams through hackathons and project development.

EDUCATION

Lokmanya Tilak College of Engineering **July 2023 – July 2027**
BE / B.Tech, Computer Science Engineering(Data Science)

Kendriya Vidyalaya Bhandup **March 2023**
HSC, Science

Kendriya Vidyalaya Bhandup **March 2021**
SSC

LEADERSHIP

Data Science Student's Association **Department Level**
President *April 2026 – Present*

- Lead a student association focused on technology, and technical, cultural and sports activities at the department level.
- Coordinate and delegate responsibilities across the team for events, workshops, and departmental initiatives.
- Work with faculty and students on planning, execution, and decision-making for association activities.

PROJECTS

VIDYUT – Intelligent Renewable Energy Platform **July 2026 – Present**

- Developed an IoT-enabled renewable energy platform to measure, verify, and value solar energy using smart-meter and ESP32 data.
- Designed a settlement engine to calculate Vidyut Credits from verified energy exports using applicable tariffs and settlement factors.
- Built a blockchain-backed digital asset system for tracking energy-credit ownership, transfers, and redemptions.
- Integrated AI-driven energy insights and anomaly detection to identify unusual consumption patterns and recommend optimization.
- **Technologies Used:** Next.js, React, TypeScript, ESP32, Blockchain, Smart Contracts, AI/ML, REST APIs, Database

REDOXX – AI-Powered Logistics Platform **July 2025 – Present**

- Developed an AI-powered freight logistics platform for vehicle selection, load matching, cost estimation, and auction-based booking.
- Built ML-based vehicle prediction and AI-agent workflows for distance, tolls, travel time, and market-rate estimation.
- Implemented an open bidding system to improve pricing transparency, booking efficiency, and vehicle utilization.
- **Technologies Used:** React.js, Node.js, Supabase, Crew AI, Scikit Learn

NagarSetu – Smart Urban Management System **Jan 2026 – April 2026**

- Developed an AI-driven digital twin concept for urban planning, resource allocation, and system forecasting.
- Built predictive models and zone-wise visualizations to support data-driven urban planning and resource allocation.
- **Technologies Used:** Next.js, ML

ORBIT – Local Commerce Platform **Jan 2025 – April 2025**

- Developed a mobile platform connecting local general stores with digital commerce, enabling vendors to digitize operations and reach customers.
- **Technologies Used:** Flutter, Dart, Firebase Firestore, Firebase Auth

SKILLS

Technical Skills
Backend Development, ML, Python, MySQL

Soft Skills
Leadership, Teamwork, Time Management, Communication, Adaptability

Development
React.js, Next.js, REST APIs, Backend Integration

AI / Data
Machine Learning, Data Analysis, Power BI

Tools & Technologies
VS Code, Git, GitHub, Blockchain, IoT, Smart Contracts

ACHIEVEMENTS

SIES Innovations 2026
Team Lead | Finalist

- Advanced to the Top 40 finalists among 500+ participating teams.
- Presented an AI-powered logistics solution focused on vehicle prediction and auction-based pricing.

DIPEX 2026

- Presented a working prototype and explained its functionality to evaluators.

Smart India Hackathon 2025
Team Lead | Finalist

- Led a 6-member team through the 36-hour national-level hackathon.
- Coordinated task allocation, system architecture, backend and ML integration under tight deadlines.

CERTIFICATIONS

Generative AI Model – NXT WAVE Feb 2025

Tableau, Power BI & Hadoop – ISTE Jan 2025

Turning Data into Decision using Python – IBM / CSRBOX Dec 2024

Data Analytics Training – Edureka Dec 2024
